

ETS Inc. SA1-LP Speaker Driver Instructions

The SA1-LP is a single speaker driver designed to connect to the audio output of DVRs, IP cameras, remote monitoring equipment etc, for talk down applications. Note- the audio input of the SA1-LP is "line level" (0db).

Speaker Placement

Locate the speaker as close as possible to the area of interest in the space to be monitored. Do not mount the speaker near air conditioning vents, light fixtures or electrical equipment. The speaker should be placed at least 5 feet away from the subject(s) to be addressed. A speaker is still usable in the range of 15-25 feet but is dependent on the level of background noise in the area. Experimentation in the environment will determine what distances work best.

SA1-LP location and power

The SA1-LP interface box is designed to be located next to a DVR or IP camera. The SA1-LP requires a 120VAC power source within 3 feet of its location. If this is not possible in your application, you can splice in up to 100 feet of 18 awg, 2 conductor cable to extend the distance between the AC power source and the SA1-LP.

Cable Run

Run a 22 gauge, stranded, two conductor shielded cable between the SA1-LP amplifier and the speaker. Keep the cable run distance under 1,000 feet (70v mode only) and away from AC power sources, light fixtures and electrical equipment. *See Figure 1 for connection diagram.*

SA1-LP level control

The speaker level can be adjusted to a higher or lower volume. Experiment with the level control to achieve the desired volume.

70V / 8 Ohm direct switch

If you want to use an 8 Ohm speaker, place this switch in the 8 Ohm position and limit your speaker cable run to 250 feet. If you are using a 70V speaker, place the switch in the 70v position and pick the wattage tap closest to 2 Watts or use an ETS Sound Surveillance speaker.

SA1-LP audio input.

This input is line level (0db). Connect this to the audio output of your DVR, IP camera, etc. If the audio output are screw terminals, cut one end off the supplied patch cable and strip back the wires. Connect the center conductor to "+" terminal and the shield to the "-" terminal.

Gain switch

Select position that gives best range in volume for the connected audio source

Headphone jack

Connect and headphone with a 3.5mm cord to listen to connected source audio

Caution

It may be against the law to install this microphone kit in certain environments. It may also be against the law to record conversations of the person(s) being monitored without their knowledge. It is the responsibility of the installation company and end-user to determine if the application of this product is legal. These laws vary from state to state. If you are not informed on these matters, consult a qualified attorney or contact the appropriate state agency. A sticker is provided with this kit for the applications where notification must be posted.

Warranty

All ETS products carry a one year parts and labor warranty. This warranty does not cover damages as a result of misuse, improper handling of the unit or exposure to extreme temperatures or moisture. At its discretion, ETS reserves the right to repair or replace this unit under the conditions of the warranty. If you experience problems with your equipment call ETS at: 505-888-3923 to obtain a return authorization number. Equipment requiring repair beyond the warranty period or units that have been damaged or are not covered under the warranty can be repaired by ETS for a minimal cost under most conditions.
